Warm Weeding Working Bee, Sunday, Feb. 21

## TEA & TASKS

Our new normal  
- garden grown and  
picked herbal tea -  
before getting into it.

THANKS Sara  
for all the yummys  
that got us through this  
very hot morning!

Even though it was  
heads down  
and bottoms up,  
weeding paspalum  
in the food forest...

Growth...

...we still took time to admire the growth since last Working Bee...only a fortnight ago. In Michael's absence Liz took the reigns and shared out the tasks and we got a lot done. Apart from removing the paspalam and other weeds, we fertilised, planted rhubarb, raspberries and elderberries in the food forest, weeded in the fruit tree bed, netted, dug up potatoes amongst other things. Hot but great.

## Discoveries and questions:

Raspberries planted by Cloe and Alice (who always manages almost everything...still with one hand only)

1. Do all raspberries sucker?

2. Are these GALA apples? Should Galas be picked now?

Do they have to 'mature' off the tree before eating?

Well we tried eating both picked from the tree and fallen on the ground. Delicious.

3. What is the best remedy for mildew on cucumber and pumpkin vines?

**Can YOU guess, what this stunning little flower below is going to produce?**

**A Pomegranate!** Isn't it just stunning! We can't wait to follow its growth and taste the outcome, so the last job of the day was making sure it was safely netted.

Our next working bee will be on **Sunday, March 7, from 9 am to 1pm** starting with freshly picked tea from the garden. Looking forward to seeing both new and old gardeners. Thanks to our two new gardeners Natasha and Cloe for coming to lend a hand to Liz, Sara, Alice and Birte.

If anyone has a bit of spare time before next working bee, the crushed granite paths still need weeding. Thanks!!

**Please don't forget to bring a cup, plate and utensils to EVERY working bee,**
